The first thing is first I grew up in southern Massachusetts, I graduated from Fairhaven High School. Went straight into the United States Army. I enlisted as a diesel mechanic, this role taught me lots of mechanical skills, technical, troubleshooting skills, communication skills, and lifelong lessons. There I spent 6 years working/training in the states and 1 year in sunny southern Afghanistan. Overseas taught me a lot about myself and life. I would say it brought out inner energy inside of me to strive to always be the best I can be and the best at what I do. Never settle for less because our lives as humans are so fragile in this universe. After the military, I went straight into college where I thought I wanted to become a pharmacist, but quickly realized it was not the career I wanted. Video games and technology have always been a passion of mine, combining that with the desire to learn led me towards switching my major to Computer Science. I have never coded before switching over, I always thought coding was like the movies with a bunch of 1010101010101. Learning Java as my first language was difficult but rewarding. Over my years at Bridgewater state, I learned many languages I listed on my home page.

If you are still reading, this is a small brief summary of me. I am much more than a few sentences, contact me directly if you want to really pick my brain. My contact info is a hyper link on my main page. I look forward to speaking to anyone!
